

## Doors

The Darlington range of sliding doors

are a versatile home design option, saving space, easily accommodating flyscreens and offering a multitude of combinations when set with fixed doors.

A pair of sliding wooden doors can be set between matching fixed doors, resulting in a wide, light-admitting vista. The inner pair of doors slide outward to each side behind the outer fixed doors.

This sliding design saves space - the doors need not swing outward onto a verandah or into the building.

A matching pair of flyscreen doors, also utilising the sliding design, allows a cool breeze through while keeping bugs out.

Single doors and double doorsets,

or French doors, as they are widely known, utilise Wittmont's quality designs of the Jandakot range.

Whether a single entry door, the opening statement of your home, or a pair of wooden doors offering a grand opening, the Jandakot series combines quality, security and excellent weather-sealing with the beauty and character of natural timber.

As the unsurpassed specialists in exterior joinery for all conditions, Wittmont's tried and tested designs never compromise on quality and functionality.

The Mosman range of multifold doors blur the transition between indoors and outdoors for your entertaining areas.

Enjoy the comfort of protection from the elements with your multifold doorset closed, and then easily and quickly slide them away to open your home to Western Australia's delicious climate.

Our clients find adding a single matching Jandakot door to the open end of a Mosman multifold doorset adds functionality - for quick access to your courtyard, simply use the single door without touching the multifolds.

The Mosman design can also be used in a window configuration - ideal for opening to a wide view in a kitchen over a sink or bench.

```
window.onload = Shadowbox.init;
```

```
featuredcontentslider.init({  
  id: "slider_dw", //id of main slider DIV  
  contentsource: ["inline", ""], //Valid values: ["inline", ""] or ["ajax", "path_to_file"]  
  toc: ["darlington", "jandakot", "mosman"], //Valid values: "#increment", "markup", ["label1", "label2", etc]  
  nextprev: ["", ""], //labels for "prev" and "next" links. Set to "" to hide.  
  revealtype: "click", //Behavior of pagination links to reveal the slides: "click" or "mouseover"  
  enablefade: [true, 0.2], //[true/false, fadedegree]  
  autorotate: [false, 4500], //[true/false, pausetime]  
  onChange: function(previndex, curindex){ //event handler fired whenever script changes slide  
    //previndex holds index of last slide viewed b4 current (1=1st slide, 2nd=2nd etc)  
    //curindex holds index of currently shown slide (1=1st slide, 2nd=2nd etc)  
  }  
})
```
